## New Suspension System for Increased Operator Comfort

*Suspension system installed on DUX model TD-18 with totally enclosed, fully equipped cab.*

*Suspension system installed on DUX model DT-20N with FOPS/ROPS canopy.*

After installation and intensive testing on DUX model TD-18 and DT-20N underground trucks, DUX is pleased to announce that a new operator suspension system is now available on all haulage and utility equipment with totally enclosed FOPS/ROPS cab or canopy.

Able to withstand the rigors of harsh, underground mining conditions and particularly well-suited for applications requiring travel over longer distances at higher speeds; the system significantly softens impact loads and vibration levels experienced by the driver and co-driver.

DUX is also currently in the process of manufacturing this system so it can also be offered as a retrofit kit for field installation.
